

Top Slider

Portable person lifting aid for roof railings.

A portable lifting aid, which is fixed to a pair of Thule carriers (not included) on a vehicle with roof railing. The passenger is lifted by a self-locking lift mechanism and moved in or out of the vehicle by sliding along the vertical bar, which is fixed to the roof rack. When the lift procedure is ready, the vertical bar and the support pillar are stored inside a tube on the roof rack.

It is movable between vehicles and requires no permanent modifications to the vehicle or interference with its safety systems.

Quick facts

- Economic *Getting Seated* solution
- No permanent work on vehicle
- Transferable between vehicles
- Suits both first and second row of seating
